Business Objective

To update the Coverage Calculator logic for dialysis in support of transplant admissions to ignore the admissions for coverage. To add a discharge reason of delayed function resolved resolved for these admissions.

Business Description

EQRS needs a new **Discharge Code** for transplant patients who are admitted to a dialysis facility just for dialysis support not due to a failed transplant. The EDB should ignore this admission and discharge so that the patient will not be picked up and lose their transplant benefits. A corresponding Discharge code is needed for transplant patients that are given the new Discharge code.

(The Delayed Transplant Function Resolved following a Transplant discharge option will be used when a transplant patient has sufficient kidney function to no longer require dialysis.)

Benefit Hypotheses

- Patient benefits will not be reduced

Acceptance Criteria

Acceptance Criteria	Notes/Questions	Team (s) Involved
Use existing admit reason - Dialysis in Support of Transplant	Ensure that EDB ignores this admission so that the patient will not be picked up and lose their transplant benefits. This reason should be used only as a kick start after a Transplant.	MOD
Add new discharge reason - Delayed Function Resolved following a Transplant and Delayed Function Unresolved	Is used until a transplant patient has sufficient kidney function to no longer require dialysis Update admit/discharge reason rules with new discharge reason (see attached) Ensure that EDB ignores this admission so that the patient will not be picked up and lose their transplant benefits. Delayed Function Unresolved reason code is used when the transplant center indicates the patient's kidney failed.	MOD
The patient's existing Transplant admission should remain open	Two open admissions will be allowed when the previous admission is Transplant and the new admission is Dialysis in Support of Transplant	MOD
Update the description for reason - Recover Function	Description is updated to "Recovered Function of Origin Kidney". This reason should only be used when the patient has their original kidney.	MOD
Ensure admit reason of Dialysis in Support of Transplant does not trigger a 2728 (re-entitlement)		MOD

Exclude these admissions from 2744	These admissions will not be used in calculations for the 2744	MOD
------------------------------------	--	-----

Assumptions

- Implemented for both UI and EDSM
- EDB will ignore all patient admissions with an admit reason of Dialysis Support of Transplant and discharge reason Delayed Function Resolved following a Transplant

Dependencies

Dependency	Outgoing Team(s)	Receiving Team(s)	Date Needed	Date Completed	Notes

Notes

- This feature was formerly titled "Delayed Function Resolved Following a Transplant".
- Data cleanup for currently implemented dialysis in support of transplant with inappropriate discharges.
