QNP Nomenclature

Common Name	Alternate Name/s	Description
Legacy (Existing)		
Fatwire	-	• The content management system for the existing QNP (QNP 1.0). • Often (erroneously) used to mean QNP in general terms; QNP alone remains hosted on Fatwire.
QNP (QualityNet Portal)	• QNP 1.0 • Legacy QNP • Qualitynet.org • QualityNet Public Site • QualityNet Portal	• The public-facing informational website at qualitynet.org (unauthenticated). • End-users visit the site to view program information, download specifications manuals and documentation, etc. • HSAG and other CMS contractors create and submit content to the content managers who use Oracle Fatwire to manage the site.
QSP (QualityNet Secure Portal)	-	• The secure portal for QualityNet (authenticated). • The user must log into QSP to submit quality data.
Transformation (New)		
H-CMS (Headless Content Management System)	Headless CMS	• The headless content management system is a content management system (CMS) built from the ground up as a content repository that makes content accessible via a RESTful API for display on any device. • It contains a content-management-ui for adding programs/metadata etc. as part of H-CMS. • H-CMS is not the QNP replacement – it is the true and actual Fatwire framework replacement. • ADOs may integrate for H-CMS functionality as part of their work, but that is independent of H-CMS and QNet 2.0.
QualityNet.org replacement Admin UI	• QNP Admin UI • QNP 2.0 Admin UI • QNet 2.0 Admin UI	• The content-serving interface that integrates with the H-CMS. • Content Managers will log into the QNP Admin UI to manage/update content in QNet 2.0.
QualityNet.org replacement	• QNP 2.0 • QNet 2.0	• The replacement for QNP (QNP 1.0). Redesigned public-facing website including an updated UI, responsive design, etc. – the H-CMS, QualityNet.org replacement Admin UI, and QualityNet.org replacement public facing screens collectively comprise the QNet 2.0 and therefore the QNP replacement. • **The external naming convention for the replacement system will remain "QualityNet"** • **The internal naming convention for the replacement system will be QNP 2.0.**
