PRS 2.0 Development and Design Update #7

HSP expanded edit update

This message provides updates for the **PRS 2.0 HSP module that will provide ADOs with expanded edit functionality for PRS 2.0 records.** It also contains the PRS 2.0 reference materials for User Role process, data sources, and an **updated** simplified Roadmap original included from the original Development and Design Update communications sent between 12/2022 and 4/2023.

What changed from communication #6 to #7?

- The release for HSP extended edits has been moved from 5/26 to 6/27

What are the HSP module expanded edits in PRS 2.0?

- HSP module expanded edits in PRS 2.0 will include ability to add/edit to the following:
  - HSP Details (including add/edit new CCNs/Providers)
  - Physical Location
  - Cross Reference
  - Unit bed

- The PRS 2.0 APIs that were exposed for connection (on 2/7) will be updated after 6/27 to reflect the expanded edits changes as well – further communications for Prod timing will be sent later.

What will NOT be a part of HSP module expanded edits release in PRS 2.0?

- ASC and IPF file upload processes <u>will not</u> be a part of the HSP expanded edits release.
- HSP module expanded edits in PRS 2.0 <u>will not</u> include the ability to add/edit the following.
  - QIO defined fields.
  - FI/Carrier/MAC

With these new expanded edits, does this mean PRS 2.0 will be the definitive source of truth for this data now and not iQIES in the HSP Module?

- iQIES will remain the source of truth for the data present in PRS 2.0 HSP Module.
- The expanded edits create an opportunity for users to add/edit HSP details for the above referenced fields and create CCNs/Providers directly in PRS 2.0.
- As the source of truth for this data (iQIES) cannot be changed, PRS 2.0 will identify the additions and edits made within PRS 2.0 as "community updated records", which are considered "unverified" to the source of truth data.
- The reasoning for this is because there is no approval to push the PRS 2.0 data back to the source (iQIES) for reconciliation.
- The user community will be able to toggle between the iQIES data source of truth and fields edited directly in PRS 2.0 will be visually identified as "community" edits.

When will the HSP module expanded edits be available in PRS 2.0?

- HSP module extended edits will be available in PRS 2.0 after 6/27.

Will I need to request a new PRS 2.0 role through HARP once the HSP expanded edits are ready?

- No – if you presently have a BFCC Editor or HSAG Editor role in PRS 2.0 now, these roles will be pre-configured to provide the HSP expanded edits capabilities upon release to Production.

Until the new HSP expanded edits are complete, what does this mean for PRS 2.0 in the meantime?

- As previously noted in PRS Communications, if any Provider and Contact Information data was updated within PRS 1.0 HSP module from January 11, 2023 that data **will not** be in PRS 2.0.
- Users should continue to add/update CCNs and use the Vendor Contract and Waiver sections within PRS 1.0.
- The HQR Team owns and maintains the PRS 1.0 Vendor Contract and Waiver sections and will identify a schedule to move those modules to their NextGen system within 2023.

I don't have a PRS 2.0 role yet – how do I request one?

- If you are new to PRS 2.0 and would like to access the system, please log into HARP and navigate to **User Roles;** select **Request a Role in HARP**; on the *Select a Program* page, select **QualityNet Workspace**; on the *Select an Organization* page; select **ESS PRS**; Under *Roles*, select (as applicable) **PRS General User, BFCC Editor, or HSAG Editor** and **Submit.**
- Once the role is approved you can login to PRS 2.0 within the QualityNet Workspace.

PRS 2.0 Modules and Simplified Production Roadmap

Reference the PRS 2.0 Roadmap on Confluence for specific details.

PRS 2.0 Module/Other Name	Status	Additional Details
HSP (non-editable)	In Prod as of 9/15/2021	-
HSP (editable)	In Prod as of 1/11/2023	-
Beneficiary	In Prod as of 1/18/2022	-
Medicare Advantage (MA) Plan	In Prod as of 8/2/2022	-
PRS 2.0 APIs (not a module)	In Prod as of 2/7/2023	APIs exposure enabling other systems to access PRS 2.0 data directly
HSP expanded edits	Developing	Targeting Prod 6/27
Physician	By Sept 2023	Exact Prod dates TBD
Physician Group	By Oct 2023	Exact Prod dates TBD
Physician Member	Exact Prod dates TBD	-
QIO	Exact Prod dates TBD	-
QIO Defined Titles	Exact Prod dates TBD	-
FI/Carrier/MAC	Exact Prod dates TBD	-
Vendor, Waiver	***N/A (not owned by ESS)***	***HQR will incorporate into their Next Gen system***

Note: ESS QNP/PRS team will continue to address prioritized enhancements and defects across all Modules in parallel to the new Module development work.

The timeline for the modules after HSP expanded edits is subject to change based on priorities.

PRS 2.0 Current Data Sources and Ownership

PRS 2.0 Modules	Current Data Source	Details	Data Update Freque

HSP	iQIES	PRS 2.0 specific HSP fields are editable (e.g., Contact Information, MOA fields, Physician Acknowledgement Monitoring)	iQIES data updated in PRS 2.0 daily.
Beneficiary	BIC	APIs used to access BIC	Real-time
Medicare Advantage (MA) Plan	HPMS	Accessed through CDR	Refreshed weekly every Monday – jobs complete by 8am ET

PRS 2.0 Points of Contact (POCs)

Name	Role	Contact
Patrice Benn	CMS Product Owner	Patrice.Benn@cms.hhs.gov
