# PRS 2.0 Development and Design

## October 2023 Update

This message provides current and/or planned updates for the **PRS 2.0 system development**. It also contains the PRS 2.0 reference materials for User Role process, data source overview, and the release timeline.

---

### **Important News & Announcements**

**Notice of upcoming release for System-to-System Authentication.** This feature allows ADOs to connect their system(s) directly with PRS 2.0 using a service token, eliminating the need for user roles. Once connected, your integrated system will have full access to all PRS 2.0 APIs and will be able to pull any PRS 2.0 data needed directly into your system.

The development work for this feature has been completed in Production. The remaining work requires a CMS OIT ticket and is expected to be completed by October 6, 2023; at which time we will provide a formal announcement along with ADO onboarding instructions.

### **PRS 2.0 Modules and Simplified Production Roadmap**
