

September 29, 2023

## Planned Activity

**Planned Actions:** A scheduled SAS Viya, Zeppelin, Databricks and CDR maintenance event will begin tonight, September 29th, at 8:00pm ET.

**Impacted Community:** All SAS Viya, Zeppelin, Databricks, and CDR Users

**Planned Downtime:** All scheduled maintenance events begin at 8:00pm ET and end approximately at 12:00am ET. In general, some maintenance events may require longer time, in which case users will be notified separately. A communication will be sent out once maintenance is complete.

### Planned Activities:

- Routine OS and Security Patching on CDR, SAS, and Databricks
- Routine patching on CSAT EMR Cluster
- Routine patching of the CentOS Servers
- Address security vulnerabilities

### Call to Action:

- Please ensure to save your work (i.e. data, script, and tables) before the maintenance event. This is to ensure that your information will be saved throughout the maintenance process. Any long running jobs would also need to be restarted **after the event**.
- Save your data from SAS Content to your workbench by following [these instructions here](#).
- Please also save any of your CASLIB datasets before maintenance by also following [these instructions here](#). After the maintenance window, you will need to load your tables back into memory in order to continue working with them.
