

June 2, 2023

Planned Activity

Planned Actions: A scheduled CAP & CDR maintenance event will occur tonight, June 2, at 8:00pm ET.

Please note that the additional Saturday Databricks maintenance, reported yesterday, will not occur.

Impacted Community: All CAP (SAS Viya, Databricks, and Zeppelin) & CDR Users

Planned Activities:

- Routine OS and Security Patching on CDR and CAP systems
- Routine patching on CSAT EMR Cluster
- Routine patching of the CentOS Servers

Planned Downtime: All scheduled maintenance events begin at 8:00pm ET and end approximately at 11:00pm ET. In general, some maintenance events may require longer time, in which case users will be notified separately. A communication will be sent out once maintenance is complete.

Call to Action:

- Please ensure to save your work (i.e. data, script, and tables) before the maintenance event. Any long running jobs would also need to be restarted after the event.
- Save your data from SAS Content to your workbench by following [these instructions here](#).
- Please also save any of your CASLIB datasets before maintenance by also following [these instructions here](#). After the maintenance window, you will need to load your tables back into memory in order to continue working with them.
