

Planned Maintenance Activity Tonight: Extended Downtime

Standard Maintenance and Centralized Data Repository (CDR) User Data Migration: Phase 5.1

Planned Actions: A scheduled maintenance event will begin tonight, September 6th at 8:00pm ET.

Impacted Community: All CCSQ Data & Analytics tool users (CDR, SAS Viya, Databricks).

Planned Downtime: This maintenance event will tonight, September 6th at 8:00pm ET and end on September 8th at 6:00pm ET.

CDR User Data Migration Information: The CCSQ Data & Analytics team will be migrating databases and tables to the new consolidated environment over the next two quarters. The next phase of the migration will occur on Friday, September 6, 2024. To see a list of the databases that will be migrated, reference our article on the Portal: [Consolidation of Tables and Databases](#).

Call to Action:

- Please ensure your work is saved (i.e. data, script, and tables) before the maintenance event. This is to ensure that your information will be saved throughout the maintenance process. Any long-running jobs would also need to be restarted after the event.
- Save your data from SAS Content to your workbench by following [these instructions here](#).
- Please save any of your CASLIB datasets before maintenance by [following these instructions](#). After the maintenance window, you will need to load your tables back into memory to continue working with them.
- Ensure that all active compute and R clusters are turned off. This step is necessary to allow these clusters to receive the upgrade to the new Databricks Runtime.

Post Migration Note: If you utilize scripts that rely on the table locations being migrated, the updated location can be found after the migration in the table definitions.

If you have any concerns related to contractual deliverables during this period, please reach out to our team through the [request form](#), indicating other possible timeframes, and our team will accommodate as per availability of resources.
