CDR Weekly Refresh Update

Please note below the data refreshes that occurred within the Centralized Data Repository (CDR) during the week of 8/16/2020 – 8/22/2020. For specific refresh dates of each source, please reference the CDR Data Catalog on [Confluence](#). The following sources were refreshed:

CDR Hive Schema
legacy_hqr_cart_final
legacy_assessment_data
legacy_provider_data
nch_part_a
nch_part_b
beneficiary_data
provider_pmi_data
csat_2
csat_5

The data refresh dates are published for awareness of data timeliness. If your organization requires data to be refreshed on a different timeline or cycle, please create a ServiceNow request for the "ADO-CDR-Support" and include details of your request including business justification, data source, requested refresh frequency, and requested refresh dates. The "Most Recent Refresh" refers to the date the data was extracted from the legacy database or source system. This data is typically available 24-48 hours after extraction. The "Next Refresh" date marks the last possible day the data will be available in the CDR. If you have any questions, please contact us at HCQIS_Data@hcqis.org.

New! Quality Payment Program (QPP) Universal Data Set (UDS) – Available in CDR

The Data and Analytics Modernization team has granted access to the 'quality_measures_qpp_uds' hive schema for organizations with approved access according to their CMS Data Use Agreement (DUA). Users can begin to access this data in the CDR today. This schema includes data from the QPP data warehouse. The following document(s) are posted to the CDR data catalog on Confluence.

QPP UDS Table Layout – This document contains the table names, column names, and data types for QPP data within the CDR.

Full UDS Data Dictionary – This is a data dictionary from QPP with further details on column names and descriptions of the tables.

UDS ER Model Diagram – This artifact contains the data model for the QPP UDS.

The data refresh of the QPP UDS is planned to increase in frequency in the future. The Data and Analytics Modernization team will include further details of the refresh frequency on the data catalog when available. Please refer to the 8-13-2020 Communications Call for details on working with table names and/or column names that are greater than 32 characters in length.

Communications Call This Thursday

Our next bi-weekly Communications Call will be this Thursday, August 27th, at 1:00pm EDT. This week, we will review Best Practices and newly developed macros. Please consider [joining us](#) to learn more.

Special Focus: How to Utilize Global Macros

Check out our special focus article [here](#) on Confluence, "How to Utilize Global Macros". This helpful article presents global macros to enable users to get quick information from Viya to schema/tables in Hive. Please reference the article for more information such as a list of global macros.

If you have any questions or need assistance, please contact us at HCQIS_Data@hcqis.org.
