CDR Weekly Refresh Update

Please note below the data refreshes that occurred within the Centralized Data Repository (CDR) during the week of 8/23/2020 – 8/29/2020. For specific refresh dates of each source, please reference the CDR Data Catalog on [Confluence](#). The following sources were refreshed:

CDR Hive Schema
compare_nursing_home
legacy_provider_data
qmars
legacy_hqr_hai
legacy_hqr_struct_msrs
legacy_hqr_qnol_extfilapp
legacy_hqr_sdol_extfilapp
legacy_qnol_user_admin
legacy_cldw_prod_data_mgmt
nch_part_a
nch_part_b
beneficiary_data
provider_pmi_data

The data refresh dates are published for awareness of data timeliness. If your organization requires data to be refreshed on a different timeline or cycle, please create a ServiceNow request for the "ADO-CDR-Support" and include details of your request including business justification, data source, requested refresh frequency, and requested refresh dates. The "Most Recent Refresh" refers to the date the data was extracted from the legacy database or source system. This data is typically available 24-48 hours after extraction. The "Next Refresh" date marks the last possible day the data will be available in the CDR. If you have any questions, please contact us at HCQIS_Data@hcqis.org.

Special Focus: New Global Macros

Check out our special focus article [here](#) on Confluence, "How to Utilize Global Macros". Please note the three new macros (#10 - #12) addressing the following topics: how to see the amount of space used by your project database and the details on each individual table, how to show usage for all project databases you have access to, and how to compress a single file with gzip compression and output to the same folder.

If you have any questions or need assistance, please contact us at HCQIS_Data@hcqis.org.
