Weekly Communication

November 30, 2020

This email is part of a weekly communication series from the Data and Analytics Modernization team, designed to provide you the latest updates on the SAS Viya application, the Centralized Data Repository (CDR), and user experience offerings.

This week's email contains information and updates on the following topics:

- CCSQ Data & Analytics Data Camp – ***Take our survey!***
- Important URL Change
- SAS 9.1 and 9.4 Server Decommission
- NCH Part A and Part B Data Discrepancy
- CDR Weekly Refresh Update
- Knowledge Base Article of the Week
- Important Dates and Links

CCSQ Data & Analytics Data Camp

Thank you to all our users who attended the very first CCSQ Data & Analytics Data Camp, a multi-session, multi-day event focused on educating the CCSQ Data & Analytics user community, on November 17th and 18th. During this special event, technical experts and special guests presented during multiple one-hour sessions, which focused on SAS Viya and the CDR.

Check out this page here on Confluence for the recordings and meeting materials. As the Data & Analytics Modernization team plans for the next Data Camp in early 2021, **please fill out the feedback survey. We value your feedback and hope you take the time to share your thoughts from the event.**

Important URL Change

Please note that the SAS Viya URL has changed to https://qnetanalytics-viya.cms.gov/. The obsolete URL will automatically redirect you to the new URL to minimize access issues. This redirect will be in effect until **tomorrow, December 1st**. Please update your bookmarks immediately.

SAS 9.1 and 9.4 Server Decommission

For all organizations and users utilizing the SAS 9.1 and 9.4 servers, please remember that these servers will be decommissioned as part of the Ashburn Data Center evacuation. This will occur on November 30, 2020. If any of these organizations or users have any questions about this upcoming decommission, please contact us at HCQIS_data@hcqis.org.

NCH Part A and Part B Data Discrepancy

On 11/24/2020, a data discrepancy was identified in the NCH Part A and Part B data that also impacts CSAT. The discrepancy is due to a Mainframe hardware issue that caused the nch_daily_proc_dt to be written incorrectly for some claims. These should be identifiable as records where the field cwf_frwrd_dt is '2020-07-14' and the nch_daily_proc_dt is '2020-07-15'. The daily processing date should instead have been written out as '2020-07-16'.

Normally, nch_daily_proc_dt and nch_sgmt_link_num are used in Part A header and line joining logic to identify a unique claim. In the meantime, we recommend temporarily for users to add the fields bene_clm_acnt_num, bene_ident_cd, clm_thru_dt, and clm_from_dt to identify a unique claim as a temporary solution. The corresponding CSAT fields would be bene_clm_num, hse_clm_thru_dt, and hse_clm_from_dt. The DAMOD team is currently in contact with the CDUG to confirm next steps on correcting the data issue.

More information will be posted to the DAMOD Known Issues Log and CDR Data Catalog when it is available. If you have any questions, please contact us at HCQIS_Data@hcqis.org.

CDR Weekly Refresh Update

Please note below the data refreshes that occurred within the Centralized Data Repository (CDR) during the week of 11/22/2020 – 11/28/2020. For specific refresh dates of each source, please reference the CDR Data Catalog on Confluence. The following sources were refreshed:

CDR Hive Schema
beneficiary_data
provider_pmi_data
nch_part_a
nch_part_b
quality_measures_qpp_uds
legacy_sdol_extfilapp

The data refresh dates are published for awareness of data timeliness. If your organization requires data to be refreshed on a different timeline or cycle, please create a ServiceNow request for the "ADO-CDR-Support" and include details of your request including business justification, data source, requested refresh frequency, and requested refresh dates. The "Most Recent Refresh" refers to the date the data was extracted from the legacy database or source system. This data is typically available 24-48 hours after extraction. The "Next Refresh" date marks the last possible day the data will be available in the CDR. If you have any questions, please contact us at HCQIS_Data@hcqis.org.

Knowledge Base Article of the Week: How to Stop All Hive Jobs Spawned by Interactive SAS Sessions

This week's Knowledge Base article highlights "How to Stop all Hive Jobs Spawned by Interactive SAS Session". This article will cover information on this practice, since users should avoid to run Hive jobs for hours or days until they timeout. Check out the article here on Confluence for detailed information.

Important Dates and Links

Upcoming key dates:

- SAS 9.1 and 9.4 Server Decommission   November 30th
- Communications Call   December 3rd at 1:00pm EST
- Communications Call   December 17th at 1:00pm EST

Please note these helpful quick links below, pointing you to some key spaces on our CCSQ Data & Analytics internet facing space on Confluence:

- CCSQ Data & Analytics Home Page
- Data Catalog
- Known Issues Log
- Communications Calls Archive
- Knowledge Base

If you have any questions or need assistance, please contact us at HCQIS_Data@hcqis.org*.*
