What is a Journey Map?

"Walking a mile in another man's shoes". Customer Journey Mapping is a document; a layout of the customer's experience with a product, service company or brand over time and through multiple avenues. It is a way for you to see the overall effect of your product/service/company through the eyes of your customer.

Why Should You Use a Journey Map?

As the providers of a product or service, we tend to see the process from our point of view only. We can be unaware of what emotions the customer is experiencing and what part of the journey is the catalyst for those feelings. Emotions are the motivating force of many actions and choices.

Journey Mapping provides us with valuable insight into the customers' emotions. This is the platform from which we can build develop improvements to enhance the customer experience, guide them through their journey and ultimately help them to achieve their goal in interacting with us or our product.

How Do We Do This?

There are various additions or modifications on how one can produce a Customer Journey Map. However the basic steps to developing an effective Customer Journey Map are as follows:

1. **Identify the Persona/Point of view:** There can be numerous types of users who come into contact with your product or service. The Customer Journey Map should focus on one.
2. **Identify the Scenario/Goal:** Choose one scenario or one goal which would cause your previously identified Persona to interact with your product/service.
3. **List the Stages/Phases:** Based on the Scenario/Goal you've identified, list all the stages of the journey that the Persona would take to reach their Goal. It is important to list these from the customer's perspective and not your own.
4. **List Actions, Mindsets and Emotions:** The key component of the story being told by the journey map is what the Persona is doing, thinking and feeling. Under each phase list the actions the customer is taking along with the associated thoughts and feelings. This information should be gathered from research collected through methods such as Contextual Inquiries, Field Data and Diary Studies.
5. **List Touchpoints and Channels:** The map should correlate all touchpoints and channels with the goals and/or actions of the customer. This helps to identify areas of potential communication /service breakdowns.
6. **Identify Opportunities for Improvement:** Use the insight you gathered to point out occasions where you can improve the customer experience and assist them in accomplishing their goal.
